Clean Global Technology

CLEAN TUNEL

CATALOG CARD

General information

Clean Tunnel is designed for quick disinfection of people in facilities where mass events are organized. The through design made of stainless steel ensures complete safety of use. The use of proven components and modern solutions guarantees reliable operation of the device. The control unit of the device allows you to program the disinfection time and the amount of disinfectant solution used. The tunnel provides free access for wheelchair users. Clean Tunnel is a proven solution for quick disinfection of a large group of people, which is characterized by:

- Reliability,
- well-thought-out design and workmanship with the utmost attention to every detail,
- easy to use,
- effective, non-contact disinfection of the entire body and soles of shoes (does not destroy or discolor clothing),
- dynamic lighting indicating the operating status of the device,
- 14 nozzles to ensure uniform spraying of the disinfectant along the entire length of the tunnel,
- protection of the infusion of the disinfectant,
- fluid level control in the tank with built-in traffic light.

The tunnel structure is made of metal profiles encapsuched by stainless steel sheets. LED backlight allows you to clearly indicate the status of the workstation.

The disinfectant tunnel is a modern solution that allows effective fight against bacterial and fungal viruses, m.in used during mass events. It is characterized by support that does not require human intervention, as the device produces a constant uniformly distributed disinfectant mist.

When using the cab, observe the following rules::

- minors can only use the tunnel under the supervision of an adult,
- if during application the disinfected person feels discomfort should immediately leave the chamber space,
- through the disinfection tunnel should pass at a calm pace without stopping inside the,
- during disinfection, protect the eyes from the direct action of the disinfectant and do not lift the head upwards,

application:

- shopping malls and large-scale shops,
- Train stations,
- Airport,
- Offices,
- hospitals and medical centres,
- School,
- workplaces,
- sports facilities,
- halls and exhibition fairs,
- Concerts,
- cinemas, theatres and philharmonics,
- Factory,
- Construction,
- Shops.

Technical parameters	
Apply	Non-afflictive disinfection of the body
Dimensions	1200 x 2500 x 2300 mm
Transition dimensions	1000 x 2450 x 2050 mm
Material	Stainless
Scope of work	-10°C to +50°C
Weight	465 kg
Power	100-240V AC 50-60Hz
Disinfection method	Misting with disinfectant
Disinfectant	Disinfectant fluid used to fight bacteria, fungi and viruses, adapted for spraying. A set of certification approvals.
Consumption	approx. 2000 persons/hour
Spray time	3 – 10 seconds
Tank capacity	50 litres
Fluid level in the tank	Light Indicator
Tank material	Stainless
Number of spray nozzles	14
Silhouette detection	Photocell
Operating modes	Automatic
Country of origin	Poland
Warranty	12 months
